

Due: October 6th (Monday) via email (khyrenbach@hpu.edu)

Homework 3: Consists of two parts

1) Review HW1 and HW2: Make sure you know how to calculate, plot and interpret cross and auto-correlations at different spatial scales.

I will return HW 1 and HW 2 graded back to you by Wednesday October 1st, with specific instructions concerning calculations / figures / answers I would like you to try again. You will submit your revised HWs 1 and 2 with the correct answers by email. Please add the requested figures / tables / text to a word file labeled: *HW3 – your name*.

2) Figure out how to upload and install the ROOKCASE Add-In and the software manual. By Monday October 6th, you will need to have the software up and running, so you can start working on it. I would suggest you install the software in your laptop. *If you do not have a laptop you can use, we can install the Add-in in the Graduate Cluster computers.*

Your task is to:

- install the ROOKCASE Add-in
- ensure it works in your computer through Excel
- install the ROOKCASE manual
- access manual with a browser

Once you have completed part 2 of the homework, answer these two questions below:

- What is the contact info for the author of ROOKCASE, according to the manual?
 - What is the *Canadian Copyright Number* for ROOKCASE?
- Hint: go to *Citation & Contact* Menu Button
